

# Jacob Mills

He/him

## Hometown

Avon, Indiana

## Major

Bachelor of Science in Applied Math, Computer Science, and Statistics with a minor in Leadership and Data Science with a specialization in Mathematical Finance

## Why did you choose your major/What do you want to do with your degree?

I really enjoy using computer science to solve math problems and am interested in finance, so I hope to land a job working as a Quantitative Trader.

## What is your favorite thing about the Camras Scholars Program?

Camras brings together a lot of people who have a similarly strong drive to succeed, and it helps create a sort of positive feedback loop of motivation.

## Where do you see yourself in 20 years?

I can't really imagine where I will be in 20 years; there's just too many unknowns. I try rather to consider very specific outcomes I want to occur and strive for those.

## How do you think you best represent what it means to be a Camras scholar?

In 2018, for my Eagle Scout Service Project, I planned and led the replacement of old rotten flower beds and the construction of an informational sign at a students' demonstration garden in my school district.
